

# Introduction to Canine Rehabilitation

*A course offered by the Animal Rehab Division of the CPA*

## Course Description:

The purpose of this course is to provide the participant with a fundamental understanding of functional anatomy and palpation, canine behaviour as it relates in a therapeutic setting, and the ability to perform a rudimentary musculoskeletal and neurological assessment of the dog. Participants will be guided to use their existing problem-solving knowledge and understanding of basic physiotherapy principles and treatment techniques when confronted with canine specific conditions and pathologies.

## Learning Objectives:

- Describe clinically relevant anatomical differences between human and canine patients
- Identify key neuromusculoskeletal structures; bones, muscles, nerves ligaments, tendons and cartilages
- Demonstrate the ability to palpate important musculoskeletal structures on live canine subjects
- Recognize normal and abnormal gait patterns within and between breed and canine body types
- Perform a rudimentary neuromusculoskeletal physical examination of a dog (inclusive of extremities and the axial skeleton)
- Identify specific to common canine pathologies and conditions, identify treatment goals and physiotherapy techniques and/or tools to address the treatment goals
