

Introduction to Equine Rehabilitation

A course offered by the Animal Rehab Division of the CPA

Course Description:

The purpose of this course is to provide the participant with a fundamental understanding of functional anatomy and palpation, equine behaviour as it relates in a therapeutic setting, and the ability to perform a rudimentary musculoskeletal and neurological assessment of the horse. Participants will be guided to use their existing problem-solving knowledge and understanding of basic physiotherapy principles and treatment techniques when confronted with equine specific conditions and pathologies.

Learning Objectives:

- Describe clinically relevant anatomical differences between human and equine patients
- Identify key neuromusculoskeletal structures; bones, muscles, nerves ligaments, tendons and cartilages
- Demonstrate the ability to palpate important musculoskeletal structures on live equine subjects
- Recognize normal and abnormal gait patterns within and between breed and equine body types
- Perform a rudimentary neuromusculoskeletal physical examination of a horse (inclusive of extremities and the axial skeleton)
- Identify specific to common equine pathologies and conditions, identify treatment goals and physiotherapy techniques and/or tools to address the treatment goals
